PAC8 QR Ops Token

The PAC8™ QR Ops™ Token is a dedicated High Frequency (HF) credential designed specifically to use with the new PAC8™ App-based Door Controller. The QR Token offers a modern and intuitive method of adding new keyholders in to the system by using the mobile device's camera. New users can be created by scanning the QR placed on the token with the PAC8 App.

The PAC8 App converts the unique and secure code to match the token code which ensures traditional QR scanners are not able to decipher it in the same way. The QR code is printed on a label on each token which can be removed at any point if required. Supported by HF technology this token minimises the risk of cloning, delivering a functional solution for any premises.

Designed to fit on to a keyring, the PAC8 QR Ops Token complements any PAC8 system with ease of use and practicality whilst providing a highly secure and cost effective access control system. The tokens are recommended for use with the PAC DS1 HF Mullion reader and also work in conjunction with any reader from our GS3 HF range.

PAC8 QR Ops Token Features:

- Recommended PAC8 token

- Secure QR code for adding into PAC8 system

- Small design to fit onto a keyring

- High Frequency technology

- 1 year warranty

To find out how you can start benefiting from a tailored PAC security system that accommodates your business' requirements.

The PAC8 changes the way we currently think of managing access control. It enables mobile management of systems that previously required a computer.
